
Many repeated errors in error_log

Posted by Seohackers - 2022/12/10 12:23

When I check my error_log file, I see many repeated errors.
Here is an example of an error line that keeps coming up:

Task rescheduling event error for check_plugin_updates-ari-stream-quiz hook. Error code: invalid_schedule. Error message: The scheduled event does not exist. Data : {"schedule": "every2hours", "args":, "interval":7200}

Original error in French :

Erreur d'ordonnement de replanification de tâche pour le crochet check_plugin_updates-ari-stream-quiz. Code d'erreur : invalid_schedule. Message d'erreur : L'ordonnement planifié n'existe pas..
Données : {"schedule": "every2hours", "args":, "interval":7200}

Regards,
Paul

I found in file plugin-update-checker.php the following code

```
public function __construct($updateChecker, $checkPeriod) {  
    $this->updateChecker = $updateChecker;  
    $this->checkPeriod = $checkPeriod;
```

```
//Set up the periodic update checks
```

```
$this->cronHook = 'check_plugin_updates-' . $this->updateChecker->slug;  
if ( $this->checkPeriod > 0 ){
```

```
//Trigger the check via Cron.
```

```
//Try to use one of the default schedules if possible as it's less likely to conflict
```

```
//with other plugins and their custom schedules.
```

```
$defaultSchedules = array(  
    1 => 'hourly',  
    12 => 'twicedaily',  
    24 => 'daily',  
);
```

```
if ( array_key_exists($this->checkPeriod, $defaultSchedules) ) {  
    $scheduleName = $defaultSchedules;  
} else {  
    //Use a custom cron schedule.  
    $scheduleName = 'every' . $this->checkPeriod . 'hours';  
    add_filter('cron_schedules', array($this, '_addCustomSchedule'));
```

```
}
```

```
if ( !wp_next_scheduled($this->cronHook) && !defined('WP_INSTALLING') ) {  
    wp_schedule_event(time(), $scheduleName, $this->cronHook);  
}  
add_action($this->cronHook, array($this, 'maybeCheckForUpdates'));
```

```
register_deactivation_hook($this->updateChecker->pluginFile, array($this, '_removeUpdaterCron'));
```

```
//In case Cron is disabled or unreliable, we also manually trigger
```

```
//the periodic checks while the user is browsing the Dashboard.
```

```
add_action('admin_init', array($this, 'maybeCheckForUpdates'));
```

```
//Like WordPress itself, we check more often on certain pages.
```

```
/** @see wp_update_plugins */
```

```
add_action('load-update-core.php', array($this, 'maybeCheckForUpdates'));
```

```
add_action('load-plugins.php', array($this, 'maybeCheckForUpdates'));
```

```
add_action('load-update.php', array($this, 'maybeCheckForUpdates'));
```

```
//This hook fires after a bulk update is complete.
```

```
add_action('upgrader_process_complete', array($this, 'maybeCheckForUpdates'), 11, 0);

} else {
    //Periodic checks are disabled.
    wp_clear_scheduled_hook($this->cronHook);
}
}
```

Maybe I can deactivate the error by modifying this code ?

Hello,

If you want to disable cron job then replace the following code:

```
if ( $this->checkPeriod > 0 ){
```

with the following one:

```
if (false && $this->checkPeriod > 0 ){
```

Regards,
ARI Soft
