
graphical error//Zapier settings

Posted by AnnAdmin - 2023/01/30 09:00

A beautiful day,

I need an advice. I bought your ARI stream quiz.
Is super!

I just have two questions

1. The quiz results have been shown to be shrunk like this since purchase. Today it suddenly occurred to me that as it was all, I was happy. And now it's like this again. I have a quiz here
<https://onlinedjungle.cz/kviz/https://onlinedjungle.cz/kviz/>

screen

2. I would like to send the quiz result and set it up via Zapier. Based on what works for them, the automatic sequence will be started. That's probably not possible, huh? Because the connection without Zapier is practically the same on Mailerlite as the one you already have there But I read here on the forum that the result should be used somehow, or I didn't understand it, because Zapier really only offers me to add to group. or do you have instructions somewhere that I missed?

I use a translator. So I hope it can be understood.

Can you help me? I need this. :(((

Hello,

1. Could you check the link? Unfortunately we can't open it :(
2. Could you provide a screenshot where possible to see what data you want to send to Zapier? Is it main personality or results template or just result title?

Regards,
ARI Soft

1.
<https://onlinedjungle.cz/kviz>

Screen <https://www.awesomescreenshot.com/image/36436634?key=fd3d3ff833c6d12a0213d02a878a2425>

2.I made video for you :D Video

In Ari Stream Quiz there is an option to connect to mailerlite, it works - it joins me wherever I want. In several comments, you wrote that it would be possible to do it via zapier so that it would be assigned to a group based on the result? Or is it not? The new user option is shown to me, so I already have it with the basic settings without zapier.

I thought that based on the result it would be divided into the groups I need and I don't know how to set it up in Zapier :D so that it doesn't keep being stored in the same one. :D

I do not Why the url does not work, because when I tried url in chrome browser, everything was good. :D
so again
<https://onlinedzungle.cz/kviz/>

Thank you for the correct link. About issue #1, a custom CSS rule is defined on your site which limit width of element with results. Open "ARI Stream Quiz -> Settings -> Advanced" page and populate "Custom CSS styles" parameter with the following code:

```
.asq-theme .quiz-result {max-width: none;}
```

After this clean WordPress cache. It should help.

Regards,
ARI Soft

It worked. Thank you very much.

Any help with Zapier?

If I could describe it in real detail.
How does it work now?

The result will be shown and then the client will not be able to access it. It is saved in MailerLite because I have it connected, but due to the fact that I don't know what the result is, or I would have to look it up and then send an email with the result. It's no help to me.

I thought that I would use Zapier in such a way that, according to the result, Zapier would divide people into groups in MailerLite, which I would create there, and there I would already have automation created and I would not have to work with it.

But I have no idea how to set it up in Zapier. :D

If the result is passed to Zapier then you can use Paths to separate contacts based on result and then tag them in Mailer.

Paths or branching logic can be used as described here (it is not for MailerLite, but it is a common Zapier feature and can be applied for MailerLite).
