
Detailed evaluation overview

Posted by TDLL2022 - 2023/05/02 04:54

Hello,

I have created a personality test and would now like to see an overview of the individual answers (how often, which answer-possibility was clicked). I can see such an overview in the backend, but unfortunately only about the final result (= personality type). Of course I could go into the details of the individual responses/users and see what was clicked. However, this is more than tedious with over 500 participants... so is there a way to create/download a comprehensive evaluation (including all the single questions and answers)? How do I do that?

Thanks a lot for the help.

Kind regards,

Linda | The Dream Life Lab Team
