
Personality Quiz Results

Posted by maruruzicka - 2023/05/21 22:18

Hi!

I have a Personality Quiz (5 Personalities) with 10 questions and 5 answers each.

When I get the results the sum of the percentages is bigger than 100%.

Example with real results:

Your main personality is E and your percentage is 57

Personality A your percentage is 25

Personality B your percentage is 25

Personality C your percentage is 14

Personality D your percentage is 13

I attached the way I did the points assignment. Which was 1 point for the personality I wanted as true and 0 for the others.

Also, I want to know if is possible to show the summary by email only. I would like to show only the Main personality in the results page and then show the other personalities in the email. I want to encourage the user to open the email for more information.

Thanks

=====

Hello,

The plugin shows percentage for each personality separately. If maximum number of points for personality A is 70 points (if user will select answers with maximum number of points for each question) and user earns 42 points then it will 60% for this personality. If maximum number of points for personality B is 30 points and user earns 15 points (each answer can provide different points for different personality) then 50% will be shown for personality B.

The plugin doesn't provide ability to send detailed results only by email.

Regards,
ARI Soft
