FW: Unable to connect to database

Posted by raywp - 2017/03/12 16:27

_____

hi,

I saw on WP form that the tread was closed, so I post my latest one here.

What for a code to use? Because I use a plugin for the disable php execution.

I can edit the .htaccess file by ftp, so that'€™s no problem.

Regards,

===

_____

Hello,

v. 1.0.6 adds .htaccess file to /ari-adminer/adminer folder with the following content:

    Order Allow,Deny
    Allow from all

If it doesn't work in your case, could you specify what plugin you use to disable execution of PHP file so we can check what approach it uses and offer a solution how to permit execution of the file.

Regards,
ARI Soft

_____

Open .htaccess file in root WordPress folder. Find the following rewrite rule which is added by iTheme Security plugin:

RewriteRule ^wp\-content/plugins/.*\.(?:php?|pht|phtml?|phps)$ -

and add the following rule above this rule:

RewriteRule ^wp\-content/plugins/ari\-adminer/adminer/wrapper_adminer\.php$ -

It will look like:

RewriteRule ^wp\-content/plugins/ari\-adminer/adminer/wrapper_adminer\.php$ -
RewriteRule ^wp\-content/plugins/.*\.(?:php?|pht|phtml?|phps)$ -

Regards,
ARI Soft
