
Connection is valid but the screen stays blank

Posted by Stylo - 2017/04/13 10:43

I work with the webhoster "1 and 1", a German Hoster and with Wordpress 4.7.3.

The install of Adminer was successfull but there is a Problem:

Test : "Connection is valid" but if I try to get the DB the screen stays blank and no messages comes.

I tried the automatic connection and the manual connection, no success.

Hello,

Do you use any security plugin or security rules in .htaccess file?

Regards,
ARI Soft
