
No Data White Screen

Posted by IulG - 2017/05/08 12:31

Hi,

I'm using localhost with "WAMPSEVER 3.0.6" test connection is valid parameter but when selecting data screen is blank white.

iTheme security is activated. can you please help me how to resolve such error.

thanks

Hello,

A blank screen is usually appearing due to specific rules in .htaccess file. The plugin requires permission to run /ari-adminer/adminer/wrapper_adminer.php file and it tries to resolve possible conflicts with custom rules in .htaccess file, but it is not always possible. Try to use the solution from this post.

Regards,
ARI Soft

Content of .htaccess under below folder attached for your assistance

C:\wamp64\www\ozesource

Check PHP error log please. It seems a PHP error occurs when "Select data" page is opened. This post should be helpful.
