## Run and show queries results on WP pages?

Posted by WILEz - 2017/08/22 12:20

---

Hi, sorry for my bad English.

Adminer looks like a good product but how do I query from the site pages (I do not mean on the adminer database page)?

I need to show a table on my site's page where to enter data extrapolated from my database.

Among the plug-in features is written that you can do (Run SQL queries), but I did not find a guide on how to view data in my WP site pages.

I can do only inside the database manager with a classic query? Can I put a query result on a normal WP page text?

Adminer would be a sort of substitute of MySQL admin and can not interact with WordPress site pages?

=====

Hello,

"ARI Adminer" is a database manager for administrators. It is bridge between WordPress and Adminer tool. The plugin doesn't provide any integration with frontend part.

Regards,  
ARI Soft
