## WP Multi-site no possibility to modify the DB

Posted by gmonbel - 2018/02/04 20:30

---

Hi,

I use your plugin in a simple site and it works perfectly.  
But in a multi-site environment, even if I have access to the DB, I can't modify the records.

I get the message:  
ERROR 403 - Forbidden!  
The following error occurred:  
You are not permitted to access the requested URL.

What should I modify ?

In ISPCConfig, the account exists.  
In the mySQL database, the account has all permissions.

Thank you to help me.

Hello,

This problem doesn't look like a problem with "ARI Adminer". It can be a problem with rules in .htaccess file.

Regards,  
ARI Soft

You're right, in fact it was a problem of security on the server side

Thx
