
plugin conflict with WP Project Manager Pro

Posted by burke@novologic.com - 2018/02/18 16:26

When ARI Adminer is activated it causes the dashboard menu items of another plugin to duplicate.

here is some information from the Support Group of the WP Project Manager Pro Plugin.

"It seems like the ARI Adminer plugin developer uses some action hooks of the project manager plugin"

maybe they are referring to a naming conflict or scope issue?

see the attached screenshot

Hello,

Our plugin uses only standard WordPress hooks. It uses "admin_bar_menu" and "admin_menu" for menu items.

Regards,
ARI Soft
