
Access to non-wordpress tables used by plugin?

Posted by jofischer05 - 2018/11/11 12:51

Hi,
I just installed ARI Adminer and I see all wp*-tables, but only those.
But I know that I have installed plugins, which use their own tables with other prefixes.
How can I see these other tables??

Thanks for your help!
Johannes

Hello,

DB tables prefix is defined when WordPress is installed and it is used for all tables including custom plugins.

Regards,
ARI Soft

Thanks for the fast answer!

In fact I didn't look precisely enough. The prefix of the plugin tables is "wp_", in my case it's "wp_es".

This detail might help others.

Regards,
Johannes
