
Can I modify options?

Posted by jkokc - 2019/02/14 19:45

For my needs, the "import" function of this plugin has been simplified to the point that my DBA cannot use it. I'd like to modify our copy of it, setting the options to those he needs. He's using MS Access, not MySQL, and exporting his updates to our 23,775-row database as CSV files with suffix ".TXT". In addition, we have a primary index "ID" and need to have Adminer update, rather than error out, when a duplicate index value occurs (as it will for every row, since he exports the complete table rather than just the updated rows).

These tweaks are probably not needed by others, so I'm not asking for a full Adminer options interface. I'm familiar with the WordPress object models, and with php coding, not to mention Adminer itself, so could modify our copy myself if someone can tell me where to look!

Thanks in advance.

Hello,

Our plugin is a bridge between WordPress and Adminer application. Adminer is located in /ari-adminer/adminer/adminer folder. You can modify it for your needs. If you have any question about modification of Adminer, you can ask on official Adminer forum.

Regards,
ARI Soft

Thanks for the quick response. That should do it without any need for me to delve into php coding!
