
Problem with links within lightbox on https site

Posted by TheFrameGuy - 2017/02/16 01:20

I've run into a problem on an https site where I have it configured to "Open links with target="_blank" attribute" in a lightbox. I am opening another https page within the lightbox and that page has http links. The browser won't allow the http links to open within the lightbox and I am unable to add the target="_blank" attribute to those links due to that attribute being configured within ARI Fancy Lightbox.

How can I remove the target="_blank" attribute association with ARI Fancy Lightbox and then manually code each link to open a page within a lightbox? If I could do that, the problem would be solved.

I figured out the solution.

I turned off the "Open links with target="_blank" attribute" and manually added class="ari-fancybox-iframe" to all the links I wanted to use with the lightbox. Then I could use the target="_blank" for all my http links within the lightbox.

Hello,

It is possible to disable lightbox for the selected links if add no-lightbox CSS class. For example:

Some link

or if want to add lightbox to a specific link, add ari-fancybox for all links except web pages and ari-fancybox-iframe for web pages. For example:

Another link

Photo

We will add this information to documentation.

About links with mixed protocols (http and https), we will investigate how to possible to treat it, but suppose it will not be possible to modify links in an external page due to browser's security policy.
