## Blue outline around focussed objects

Posted by umby - 2017/02/17 11:22

---

Hello.  
I wish I could disable or hide the blue outline around the focussed images. How can I do?

One suggestion for a future development: could also introduce shortcodes for various functions (maps, videos, etc.)? I am still happy with the purchase of the code! :-)

Hello,

Could you provide a link to a page with blue outline around images so we can check it? This can be theme styles. You can send the link by email.

About shortcodes, do you want to use something like this:

Click me

If you have other ideas or suggestions, feel free to share them. We will be happy to implement them in future versions.

Regards,  
ARI Soft

Hello,  
thanks for your quick answer.

Â When activated, the plugin on any object enabled, then I get this outline when I get back to the page and disappears if I call the focus on anything else. This is why I can not go back to the CSS code that draws it to adapt its behavior to my child theme (Tempera Theme Cryout Creations). For example, this behavior can be seen by clicking on the article on this page (<https://ilpoliedrico.com/2017/02/platone-le-ombre-e-la-scienza-moderna.html>) but also on any other image of each post of each other article.

However I renew my congratulations for a job well done with this :-) <http://www.ari-soft.com/images/fbfiles/images/outline.PNG>

Open "Style" tab on "ARI Fancy Lightbox" page, populate "Custom CSS" textarea with the following value and click "Save Changes" button:

```
A.ari-fancybox:focus,  
A.ari-fancybox:visited,  
A.ari-fancybox:active,  
A.ari-fancybox-iframe:focus,  
A.ari-fancybox-iframe:visited,  
A.ari-fancybox-iframe:active {  
  outline: none;  
}
```

It should help.

---

We will include these style to the next version of the plugin.

Hi,  
It's ok now! It works :-)  
Thank you so much!

Best regards,  
Umberto

You are welcome. BTW, "ARI Fancy Lightbox" v. 1.3.0 is ready, it can show PDF documents in PDFJS viewer and contains the CSS rules from the previous post.

Could you check our answer about shortcodes here and give comments?

Regards,  
ARI Soft

I installed ARI Fancy Lightbox v.1.3 and saw that also works well with large PDF files. Unfortunate that does not automatically generate a thumbnail, but to that simply be remedied with a little 'of code in the post page.

The shortcode

`fancybox url="http://domain.com/page.html"]Click me`

does not work. I tried with internal and external links, pointing to pictures and PDFs, but nothing. I'm sorry, maybe if I had more documentation about that could be more help.

Greetings,  
Umberto

It looks lime misunderstanding, current this shortcode is not support by the plugin. We want to ask, you need shortcode which work in way as we described or need something another?

The advantage of owning a shortcode is being able to use all the functionality of the plugin on the fly regardless of its global configuration, maybe like in my case where you are still forced to keep previous plugins used in its place for reasons of backward compatibility in expectation of their replacement and facilitate not just writing code for customers. Also if you could also get the thumbnail to have greater visual impact would be top notch.

Here you may see an example:

<https://ilpoliedrico.com/2011/04/perle-in-cielo-e-sogni-umani.html>

The code I use is this:

Maybe it would be nice to be able to write instead:

Else

where XXX is Youtube, Vimeo, PDF, etc., just to then propose on the thumbnail the resource.

I realize, however, that to achieve this will require much work, while mine is only a suggestion to the user. Maybe in the future this kind of functionality you might propose in a major release fee that you might even sell a much higher price. The base is great and has a lot of potential that other similar tools certainly have not.

Regards,  
Umberto

PS. If you want we could continue this pleasant discussion privately via email on what I indicated on my profile. :-)

v. 1.3.1 supports ability to use the following shortcode:

Click me

Currently it doesn't support ability to generate thumbnails automatically, we will implement it in a future version of the plugin. BTW, we sent more details by email.

Is fantastic! Try this:

You can insert any image as a thumbnail, even form remote source! :-)
