
What API Key to use for automatic updates?

Posted by TheFrameGuy - 2017/02/18 16:36

I'm currently running version 1.2 and there is an update to 1.3 notification on my site. I have entered my "Envato Item Purchase Code" into the API Key field but the update fails. I also went to Envato to download the latest version but they are still distributing version 1.2.

Hello,

Check your mail please. We sent API key.

BTW, if you want to get update via Envato channel then you can use this Envato WordPress plugin. It updates all WordPress plugins which are purchased on Envato. One note, when a new version of the plugin is loaded to CodeCanyon, it should be approved by a moderator, usually it takes several days.

PS: Sorry for inconvenience.

Regards,
ARI Soft
