
Activating inside AJAX included page

Posted by jadeconcept - 2017/05/05 03:24

Hello,
I'm using pro version of your great lightbox plugin for WordPress, and am having a problem I hope you'll be able to help me with.

On one of the user profile pages, I'm calling a gallery (custom attachment display code) page through AJAX (user needs to stay on same profile tab, so this is a workaround). I've built the gallery code to include the necessary ARI classes, but when I click one of the AJAX loaded thumbnails, nothing happens.

I've read about it & had found that I have to reinitialize the lightbox after the new AJAX content is loaded, but am not a programmer and not sure what's the code/function to do so, nor where to put the code. Any suggestions? Thanks!

Current code (with loader image):

```
// Catch the click on your a tag
$(document).ready(function(){
    var trigger = $('#albumsdiv a'),
        container = $('#albumsdiv');
    trigger.on('click', function(e){
        var $this = $(this),
            target = $(this).attr('href');
        // Load the content of the page referenced in the a-tags href
        container.load(target);
        // Prevent browsers default behavior to follow the link when clicked
        return false;
    });
});
$(document).ajaxStart(function(){
    $("#load").css("display", "block");
});
$(document).ajaxComplete(function(){
    $("#load").css("display", "none");
});
```

Hello,

Update the plugin to v. 1.5.10 and use the following code to attach the lightbox to new elements:

```
jQuery(document).trigger('fancybox-refresh');
```

or the following is also possible:

```
if (window) window.ARI_FANCYBOX_INSTANCE.convertElements();
```

If have any questions or need more assistance, let us know.

Regards,
ARI Soft

Thank you so much for quick response and making your plugin even better! :-)
Sorry to bother you again, but where would I put this code? I'm very far from a javascript programmer, and an example would be most helpful. Thanks again!

Use the following code:

```
container.load(target, function() { $(document).trigger('fancybox-refresh'); });
```

instead of:

```
container.load(target);
```
