
Web site not going full screen properly

Posted by xcvator - 2017/09/07 11:45

My gallery is not going full screen like in your demo's :blush: All settings have been left at default at installation. What do I need to do to get them to act like your galleries do in your demo's

my site
<http://keithandbronnies.photos/123-2/>
thank you
keith

Hello,

Could you provide a screenshot where we can see the problem? The images are opened into the lightbox and fullscreen button is available on our side:

The screen shot you have is correct, but when you click on the full screen button the image stays almost the same size, it doesn't become "fullscreen"
thank you

It happens because image dimension (width and height) less than screen size.
