
Multiple custom HTML code into lightbox slideshow

Posted by tlelliott77 - 2017/09/12 23:29

Hi

Thanks for your great plugin. I'm using a variation of your "How to show a custom HTML code into the lightbox?" code to display multiple blocks of code. E.g.

1 This content will be shown into the lightbox

Open lightbox 1

2 This content will be shown into the lightbox

Open lightbox 2

3 This content will be shown into the lightbox

Open lightbox 3

However when I use this code I don't get the slide controls, just a close button on each lightbox. Is there any way to combine 3 separate HTML blocks into a lightbox slideshow?

Thanks

=====

Hello,

Use data-fancybox-group attribute to group items. The code will be:

1 This content will be shown into the lightbox

Open lightbox 1

2 This content will be shown into the lightbox

Open lightbox 2

3 This content will be shown into the lightbox

Open lightbox 3

Regards,
ARI Soft
