
Link to another page

Posted by Stoneturner - 2017/09/18 23:40

I have a training website using a product that is going away. The lightbox currently displays the page as in the attached picture. The linked to page contains its own player (not video) 1000x562 is the original size. I would like to use the ARI Fancy Lightbox to duplicate the output. I tried the following but it did not work.

Lesson 1

What am I doing wrong and how can I fix it. Thank you for your valuable time and consideration. http://www.ari-soft.com/images/fbfiles/images/ARI_sample_1.jpg

Hello,

Could you provide a link to a page where the problem occurs?

Regards,
ARI Soft

The page is here <https://indieoutloud.com/lesson/lesson-1/>

Basically, the link does not bring up a lightbox at all. It just opens the link to the web page. See attached picture to find the link on the page. http://www.ari-soft.com/images/fbfiles/images/ari_sample_2.jpg
