
Sharing image on facebook from gallery

Posted by Karav - 2017/11/07 23:23

Hi!

Using the Pro-Version of the plugin and it does the job well. One suggestion I have is to be able to set extra options for mobile devices. Right now you can only switch on/off. (Basically have a copy of all "regular" settings which apply only on mobile devices - of course I am aware that thanks to custom css you can use "@media screen" but having a handy GUI would be nice.) Also: A way to translate the "mouse-over text" of the buttons would be nice.

Now about my main problem:

Sharing single images on facebook works, however when I try to share an image, which is part of a WordPress-gallery, then NOT the current picture is selected, but rather a picture from a footer widget on the page. (I guess because it is the next picture after the gallery?). I am not using facebook app id, but since it works on single pictures, that can't be the issue.

Link to the page with gallery: <http://www.pfarre-mn.at/wallfahrtskirche/bilder/>

Hello,

Currently the plugin doesn't support this ability, but we will add it to the next major version.

Regards,
ARI Soft
