
ARI Fancybox and PHP 7.0

Posted by CunoV - 2017/12/05 13:39

Some weeks ago I bought ARI Fancybox Pro and it worked well. Now my webprovider wanted to update from PHP 5.6 to 7.0 and it seems, that ARI Fancybox isn't ready for this change.

I ran the Plugin "PHP Compatibility Checker" and it showed two serious errors (see the attached image).

Please make your Plugin PHP 7.0 compatible as soon as possible.

Thanks in advance.

Best regards
Cuno Vollenweider

Hello,

The plugin is fully compatible with PHP 7.x.

Regards,
ARI Soft
