
Replace Prettyphoto lightbox

Posted by Alexandros_T - 2018/02/10 10:58

Hello. I try to replace the default pretty photo lightbox of VC Masonry Media Grid with ARI Fancy lightbox. When i select in Grid Builder "large photo" as the target, it should enable ARI Fancy Lightbox. But this does not happen.

Thanks in advance.

Hello,

Gallery plugin generates HTML code for galleries dynamically on client side so it is not possible to attach the lightbox in normal way. It can be done if gallery API emits an event when gallery is created. You can ask about it gallery plugin developers.

Your support is greater than any other developer. You have previously offered me some js magic for another -client side-gallery using this code.

```
$(window).on('load', function() { $(' .justified-image-grid A').attr('data-fancybox', 'pm-gallery'); });
```

Can we do something similar here?

I don't have coding skills. The gallery developer can offer this code in functions.php of my theme to remove the PrettyPhoto gallery.

```
function remove_vc_scripts(){  
wp_enqueue_script('prettyphoto' );  
wp_deregister_script('prettyphoto' );  
}  
add_action( 'wp_enqueue_scripts', 'remove_vc_scripts', 100 );
```

But do you have any idea how to register your lightbox this way?
Thanks again.

You can try to use the following code:

```
$(window).on('load', function() { $('A.vc_gitem-link').attr('data-fancybox', 'vc-item'); });
```

Then it needs to contact gallery developers as we wrote in our previous post and ask about API of their gallery.
