
Can only open one link?

Posted by TylerH - 2018/02/12 19:13

Hi, so I am having an issue where I have linked on one page, however, only one link will open in the lightbox and the rest only open as blank white pages.

Any suggestions?

Thank you.

Hello,

If you mean a blank page which appears into the lightbox when try to open the page, it restrictions of loaded sites. They are configured to load pages into only from the same domain, it is not possible to load them from another domain. The following error occurs:

Refused to display 'https://www.domain.com/...' in a frame because it set 'X-Frame-Options' to 'sameorigin'.

Thank you for the swift reply.

Is there a way to turn the lightbox on/off by page?

You can add "no-lightbox" CSS class to the link like is described here.
