Start in full screen

_____

Hello.

I am working on a photo portfolio site and I require your wonderful plugin to start directly in the full screen mode when clicking on a photo. Also if it's possible to start the full screen mode with the image directly zoomed to 100% from the start (so without requiring that click on the image for having the entire screen covered by the photo). And then if the user clicks the mouse button the photo to become fitted to the screen (but still remain in full screen mode).

Thank you.

Re:Start in full screen

_____

Hello,

We updated "ARI Fancy Lightbox PRO". v. 1.7.2 contains "Open images into fullscreen" parameter. The lightbox will be switched to fullscreen mode when open an image. It will not work if open an image via a deep link because due to browsers security restrictions fullscreen can automatically enabled only with user interaction (for example mouse click).

Sorry, but auto zoom is not supported.

Regards,
ARI Soft
