
Deeplink preview image

Posted by Alexandros_T - 2018/02/15 06:25

Please help about this issue. When deep linking is enabled the link preview shows the generic image of the page or nothing if not specified- It supposed to show the viewed image thumbnail.

<http://tripinpictures.com/galleries/test-gallery/>

Can you please fix these issues?

Hello,

Improvement of sharing functionality is main feature for the next major release.

Regards,
ARI Soft

The plugin specifications mention "deep linking" which is just about the function I'm requesting. Please do your best to make it work.

Regards
Alex

Deeplinking is working as it should. The plugin provides an unique URL for each item into the lightbox and it is possible to open the lightbox with the item by this link. It is only one problem when this is used with Facebook sharing and this problem will be fixed in the next major release.

The plugin mentions:

â€¢Share lightbox content via social networks: Facebook, Twitter, Google+, Pinterest, LinkedIn, VK. Send by e-mail.

No clue about this "Facebook problem"

I hope to offer us the update soon.

May I suggest a solution if possible? What if when "deep linking" to take the preview as it was "direct item link" selected. I hope it would be an easy trick, but its's up to you, you are the coding master. Please also check if fb:app_id is parsed correctly
It's just a step away of being the best Wordpress lighotox!
