customize left and right arrows

Posted by jhanjon - 2018/03/05 00:10
_____

I can't figure out how to either style or change the arrows and their box backgrounds. I would appreciate either CSS selectors or whatever option can help me http://www.ari-soft.com/images/fbfiles/images/arrow_fancybox.jpg

_____

Hello,

Could you provide a link to a page with the lightbox? According to the screenshot, it looks like a style conflict.

Regards,
ARI Soft

_____

In development
http://wp.joefisherstudio.com/index.php/recent/

Since posting I have modified the CSS and added your jQuery mod for iPhone touch to get out of lightbox.

_____

Add the following CSS rule to center description:

.fancybox-caption-wrap>* {text-align:center}

The following to show navigation bottom at top position on small screens:

@media screen and (max-width: 799px) {
 body .fancybox-navigation button {
  top: 60px;

```
 }
}
```

If you want to show close button, open "Lightbox" tab on "ARI Fancy Lightbox -> Settings" page and enable "Show buttons" parameter. You can disable all buttons except "Close" in "Buttons" parameters section.

Regards,
ARI Soft

_____

Great tips!

I'll play around with this, what I see so far is that when the slide image is very tall there is an overlap of the navigation arrows but whatever is done needs to affect each slide thus a shorter slide has the arrows above it whereas the taller slide also has the arrows above in the same proportion. In other words, the arrows would move according to the slide vertical position. A way to slice this is to fix all slides to one height at the top rather than the center, not sure how that would work.

The close button just needs some styling for positioning and size.

_____

It is not possible to change position of navigation buttons only via CSS depends on slide height. It requires to create a custom javascript plugin for the lightbox.

_____

Scripting is too much for me, what about fixing a max height, or a fixed top for a slide when in iPhone view? That will always locate the arrows above a slide if the height is fixed. It may also be better, I think.

_____

You can try to play with custom CSS rules, but it seems this requires a custom javascript solution.
