## Correct Facebook preview image?

Posted by Alexandros\_T - 2018/08/29 13:37

---

Dear developer

We are expecting for long time the Facebook sharing function with deep linking, to share the correct preview image.

For the moment it posts a generic image set in Yoast or the page's feature image.

Your plugin is our only hope for this to work so please we are kindly ask for your effort to correct this as soon possible.

Best regards

Alex

This facebook preview issue seems unsolved by anyone until now.

There has to be a way to trick facebook open graph and dynamically select og:image from the image attachment

Maybe this info can help you. <https://etzelstorfer.com/en/custom-image-fb-ui-facebook-share/>

or this <http://drib.tech/programming/dynamically-change-facebook-open-graph-meta-data-javascript>

Hello again.

After many testing I found the only plugin that has deep linking with correct facebook thumbnail.

This is Justified Image Grid using Swipebox as lightbox. You can check it here

<https://justifiedgrid.com/lightboxes/photoswipe/>

Since i am a pro user and fan of your plugin, I kindly ask you if you can implement the function to ARI Fancy Lightbox. It would be perfect if it could work with your Fancybox choice instead of Swipebox which lacks facebook comments, thumbnails and play button.

Check please also the example on my page <http://tripinpictures.com/test-page1/>

I find some kind of a script executed

Is there any hope? Maybe with <http://photoswipe.com>

The preview image is a must for deep linking shares

Thank you so much. Anticipating to have the best lightbox on the market.  
For the moment there is no other working solution for specific image sharing except from Justified image grid, but this one has many other flaws.

Even though I'm already a pro customer, I'm willing to pay for this development

Trying to offer any help I can about deep linking preview implementation.  
The developer of Justified image Grid mentioned that a lightbox only solution (not a gallery plugin) with real deep-linking is not possible.  
"No, because it needs a server side component, a base gallery that knows about the images in the system. A lightbox on its own can't handle individual social sharing (that stems from deep linking)."  
Do you agree with that or does it give you a clue about your implementation?
