## Lightbox and Auto Load Next Post

Posted by momo7f - 2018/12/01 18:27

---

Lightbox does not work when Auto Load Next Post is activated

Hello,

Could you explain in more details what exactly doesn't work? Links in "next post", links in current post?

Regards,  
ARI Soft

Hello,

I am using "Bimber" template and it has the "auto load next post" feature

Lightbox works only on the first article, but not on the auto loaded articles shown from scrolling up unfortunately (When the video is clicked, it opens in Youtube).

I found this file in template files folder and it contains this: [http://www.ari-soft.com/images/fbfiles/files/content\\_partial.txt](http://www.ari-soft.com/images/fbfiles/files/content_partial.txt)

Hello,

The template loads next posts dynamically after fancy lightbox initialization. If template API supports a callback after a post is loaded then it will be possible to handle links in new post. You can ask template developer if this feature is supported.
