
Rev Slider

Posted by paul.s - 2019/02/22 13:21

Hi - I would like to open the Ari's iframe lightbox when a content layer is clicked in Slider Revolution.

The instructions are to add the `€fancybox€` class to the Attributes of the slider and to add the following script to the slider's Custom JavaScript section.

These instructions are not working. This might be a question for Slider Revolution's support, but I thought you might notice something obviously wrong with their code or suggest alternative code to address the issue.

```
/*start...revapi14 is the API name is being used for your slider */
```

```
var api = revapi14;
```

```
api.on('revolution.slide.onloaded', function() {
```

```
    jQuery(this).find('.fancybox').each(function() {
```

```
        var $this = jQuery(this);
```

```
        if(!$this.is('a')) $this = $this.removeClass('fancybox').find('a');
```

```
        $this.addClass('fancybox fancybox.iframe').fancybox({
```

```
            /* begin FancyBox options */
```

```
            width: 'auto',
```

```
            height: 'auto',
```

```
            autoSize: true,
```

```
            aspectRatio: true,
```

```
            fitToView: true,
```

```
            autoCenter: true,
```

```
            scrolling: 'no',
```

```
            type: 'iframe',
```

```
            onClose: function() {api.revresume();}
```

```
        }).on('click', function() {api.revpause();});
```

```
    });
```

```
});
```

```
/*end...*/
```

Thank you in advance for any help that you can provide.

Hello,

Could you provide a link to a page where this code is used?

Regards,
ARI Soft

Hi - <https://careaxis.ca>

Please see rev slider at top of homepage. The book an "book an assessment" button on the slider is supposed to launch <https://careaxis.ca/our-physios> in n fancybox. I used "fancybox" class in the button layer.

The JS code is in there now...and it is not working as expected. :/

Thank you!!!

Remove your custom JS code for the slider and add the following code to "Custom JS code":

```
$( 'A.rev-btn' ).attr( 'data-type', 'iframe' );
```
