
Exclude external links

Posted by Raymond - 2019/08/02 14:42

Hi there

I have set up ARI lightbox to show external links in the lightbox and it is working great. However, some sites like certain social media sites do not allow iframes.

I know that it is possible to add the "no-lightbox" CSS class to each of those links to stop this.

The problem is that I have far too many links on my site.

Is there a way I can make a list of certain sites or URLs to be excluded from being loaded in the lightbox.

This would work great in tandem with the feature of external sites being loaded in the lightbox as not all sites allow it and it would be much easier if I can make a general list of URLs that will be excluded or filtered from being loaded in the lightbox.

Hello,

Open "ARI Fancy Lightbox -> Settings -> Advanced" page and populate "Custom JS code" parameter with the following code:

```
var ignoreSites = ;
$('a').each(function() {
    var $a = $(this), domain = ARI_FANCYBOX_HELPER.getLinkPart($a.attr('href'));
    if (ignoreSites.indexOf(domain) !== -1) {
        $a.addClass('no-lightbox');
    }
});
```

It will ignore links for google.com and yahoo.com sites. You can populate ignoreSites variable with your domains.

I am looking for the same solution. I tried your code however it's still trying to pull it into the lightbox.

Could you provide a link to a page where the code doesn't work and specify what link(s) you want to exclude?

I want to exclude it from all the links on this page:

<http://www.keystonebldg.com/products-kitchen-cabinets/>

The code doesn't work because links on the page contains `www.` prefix, but it is not specified in `ignoreSites` variable. You can use the following code to ignore links with or without `"www."` prefix:

```
var ignoreSites = ;
$('a').each(function() {
    var $a = $(this), domain = ARI_FANCYBOX_HELPER.getLinkPart($a.attr('href')).replace(/^www./i, '');
    if (ignoreSites.indexOf(domain) !== -1) {
        $a.addClass('no-lightbox');
    }
});
```

Thanks! That solved this issue.

Is there a way to adapt this solution for any URL that contains the string `â€œ#page=â€œ`? This is the ending for a PDF URL that directs the user to a specific page.
