go to specific page in a pdf
Posted by dtetta - 2019/11/10 04:27
_____

Is it possible to add code in the advanced panel of ARI Fancy Lightbox so that if you set up a url link to a pdf with the #page= ending the viewer will go to that page in the PDF? Similar to have that type of ending normally works on a web browser?
 Or is it possible to turn off fancy lightbox on a given page. I would like WordPress domain specific links I set up on a certain page on my site to have that functionality.

Hello,

It is not possible to open specific PDF files into the lightbox just adding a file name in URL hash (# link). Do you want to disable the lightbox for specific URLs?

Regards,
ARI Soft

Actually Iâ€™ve looked into the problem a little more. It appears that fancy lightbox will correctly display the #page= Ending when it is converting a PDF from an external site, but not a Local PDF file. So it would be nice if you could look into this and let people know why that is the case.
 But in the absence of that, I would like to be able to disable it either on a specific page or for a specific URL, So if that is possible, I would appreciate any instructions for how to do that.

It is not possible to disable the plugin on a specific page, but this solution can be used to disable the lightbox for links to specific sites.
