
Proper support for mobiles like FancyBox 3.5 does?

Posted by vinner - 2019/11/19 00:23

Hi,

Fancybox added support for small screens by removing the top border (and bottom if no caption).

See here for example:

<https://codepen.io/fancyapps/pen/pxovaa>

Notice how the image stretches to the edge of the screen when viewed on a mobile in landscape

If you look at your own demo page, you can see that ARI Fancy Lightbox doesn't use the whole of the screen, but still has a huge border around the whole image

<http://wp-quiz.ari-soft.com/plugins/wordpress-fancy-lightbox.html>

Your plug-in uses FancyBox, so do you have any plans to update it, in line with the improvements that have made to recent editions of Fancy-box? Or maybe you can suggest a work-around?

I hope so, because yours is a good plug-in.

Regards,

Vinner
