
Can I get it working for images in MapsMarker Pro?

Posted by vinner - 2020/01/23 18:18

Hi, Your plugin is working fantastically now - thanks.

I recently installed MapsMarker Pro, which has images that don't open in the Fancy Lightbox.

Here's an example

Recent rides

Have a look at the image at the bottom (camper van) and also the image if you click the marker on the map. Is there any way I can get these images to open in a lighbox? I don't mind doing coding if necessary.

Thanks

Vinner

Hello,

Open "ARI Fancy Lightbox -> Settings -> Advanced" page and populate "Custom JS code" parameter with the following code:

```
$(document).on('click', '.mmp-list-popup A:not(.fancybox)', function(e) {
    if (e.isDefaultPrevented()) {
        return ;
    };

    var $this = $(this),
        instance = window;
    $this.addClass('ari-fancybox');
    instance.convertElements();

    e.stopImmediatePropagation();
    setTimeout(function() {
        $this.click();
    }, 0);

    return false;
});
```

This code for PRO version.

Hi, That works perfectly, thanks!

However, it works for the pictures on the left list, but not the images you get when you click a map marker. I have managed to get those working by adding another block of code identical to yours, but using .mmp-popup-text as the

target.

So now I have two blocks of almost identical code. How would I modify your selector to also include anchors inside the .mmp-popup-text class?

My long-winded version below. Thanks for your help

Vinner

```
$(document).on('click', '.mmp-list-popup A:not(.fancybox)', function(e) {
    if (e.isDefaultPrevented()) {
        return ;
    };

    var $this = $(this),
        instance = window;
    $this.addClass('ari-fancybox');
    instance.convertElements();

    e.stopImmediatePropagation();
    setTimeout(function() {
        $this.click();
    }, 0);

    return false;
});
```

```
$(document).on('click', '.mmp-popup-text A:not(.fancybox)', function(e) {
    if (e.isDefaultPrevented()) {
        return ;
    };

    var $this = $(this),
        instance = window;
    $this.addClass('ari-fancybox');
    instance.convertElements();

    e.stopImmediatePropagation();
    setTimeout(function() {
        $this.click();
    }, 0);

    return false;
});
```

Use the following code:

```
$(document).on('click', '.mmp-list-popup A:not(.fancybox),.mmp-popup-text A:not(.fancybox)', function(e) {
    if (e.isDefaultPrevented()) {
        return ;
    };

    var $this = $(this),
        instance = window;
    $this.addClass('ari-fancybox');
    instance.convertElements();

    e.stopImmediatePropagation();
```

```
setTimeout(function() {  
    $this.click();  
}, 0);  
  
return false;  
});
```
