## Lightbox Gallery add's cloned duplicate items

Posted by xav89 - 2020/09/25 10:50

Hello!

Thanks for this great plugin, it works really well!

However I have encountered an issue on a specific case.

I set up a fluid carousel slider on my website (using Kadence Blocks).

From this carousel I managed to open the images links in ARI Fancy Lightbox using custom grouping selectors (.wp-block-kadence-advancedgallery\$a)

It works. However as the carousel is generating cloned images in order to perform an infinite loop, the ARI Fancylightbox is building a gallery with those cloned images as well.

Instead of having 7 images in the lighbox gallery, I end up with 16 images :/

Those cloned images have a class '.slick-cloned' in the div containing the image and link.

I am looking for a way to avoid displaying those images in the gallery lightbox.

I found this FAQ on Fancybox which may answer my question : <https://fancyapps.com/fancybox/3/docs/#faq-6>

But I did not manage to integrate this solution.

Could you help me with that pls?

If you want to take a look at the code on the dev website: <http://dev.haras-olympie.fr/>

Thanks!!

Xavier

Hello,

Use the following grouping selector:

.wp-block-kadence-advancedgallery\$.slick-slide:not(.slick-cloned) a

Regards,

ARI Soft
