
Problems sharing individual images deeplinks

Posted by esteewhite - 2020/11/01 21:24

I have problems sharing individual images trough the buttons within the lightbox and also when I copy the actual deeplink of the image.

on Facebook - I get the thumbnail of the featured image that I have set for the page, not the one corresponding to the deeplink. Also when I click on the link I get some stupid redirect before I am sent to the actual image. This redirect shows a half loaded page and makes my site appear as broken !!! Must be fixed - need to know how, please - this redirect is not necessary at all.

example - <https://esteewhite.com/squirrel-photography/#!/view/761b258c/squirrel-plotting-something-closeup-estee-white-site-scaled.jpg>

on Twitter - I never get the correct thumbnail of the specific image that I am sharing - I get the thumbnail of the featured image that I have set for the page. That doesn't work - I need to share different images, not just the same featured image of the page.

on Linkedin - I get some random thumbnail of my logo no matter which image of the gallery I try to share.

I did try to disable all other plugins that I have on my WordPress site and the issues were not resolved so it is not a 3rd party plugin issue. The problem is within ARI Fancy Lightbox, so please help me resolve the issues, looking forward to hearing back from you, thank you.

Hello,

Sorry for the delay. We can't open the link. It follows to page with gallery. Could you check it?

Regards,
ARI Soft
