Lightbox issue with Ajax Post filtering

Posted by albertvisuals - 2020/12/06 18:07

_____

Hello,

I am using the Search & Filter Pro (https://searchandfilter.com) plugin to make my posts sort- & filter able. I am using this with Elementor Pro & Ele Custom Skin to make designed post lists.
I have now an PDF, which is opened inside the ARI Fancy Lightbox Pro.
Everything works fine, until I enable the "Load results using Ajax?". Then the Pdfs are not loaded inside the Lightbox anymore, but are just opened as a "normal" link.

Is there any possibility to make the Lightbox work with AJAX results loading?

Thank you!

_____

Hello,

Is "Search & Filter PRO" provide any javascript API to call a custom code when results are filtered?

Regards,
ARI Soft

Hello!
Thanks for your answer.

I have gotten the following reply from the plugin author:

If you are using Ajax in the form to refresh the results and this happens, and if you disable Ajax in the form and it does not happen, then what you need is to reapply the lightbox script to the posts after the Ajax has finished. You would need to know the actual script being used by your lightbox plugin, but the JavaScript would look like this:

```
(function ( $ ) {
 "use strict";
 $(document).on("sf:ajaxfinish", ".searchandfilter", function(){
   // call your lightbox script or function here
 });
}(jQuery));
```

What I have to add for the Lightbox script or function? And should I then put this in the theme's function.php or somewhere else?

Thanks!

_____

Open "ARI Fancy Lightbox -> Settings -> Advanced" page and populate "Custom JS code" textarea with the following code:

```
$(document).on("sf:ajaxfinish", ".searchandfilter", function() {
  ARI_FANCYBOX_INSTANCE.convertElements();
});
```
