Captions

_____

Hello. I'm having to use the setting "Convert file name to title" and "Smart title" to generate a caption. This isn't always ideal, for example, the title of the file might contain an error that needs correcting, or an abbreviation such as ROH becomes Roh. Is there a way to get the media file caption to appear in the lightbox?

I use single images or Jetpack tiled galleries.

Thanks for a wonderful plugin!

Re:Captions

_____

Hello,

The plugin uses file names to generate titles if titles are not specified as attribute for or element. Could you provide a link to a page where caption is defined for an image, but file name is used instead of it?

Re:Captions

_____

Hello.

On this post: https://www.gramilano.com/2021/03/hong-kong-ballets-online-dance-festival-turnitout/

All the photos in galleries or single have the Caption, Description and even Alt Text with the same caption text. The 'Smush' plugin has added 'scaled' to the file name, for example, and so that appears in the caption.

If I don't tick "Convert file name to title" and "Smart title" there is no caption in the lightbox. At this time, both are checked to credit the photographer etc.

Thank you.

Re:Captions

_____

Open "ARI Fancy Lightbox -> Settings -> Advanced" page and populate "Custom JS code" with the following code:

```
setTimeout(function() { $('.ari-fancybox>IMG').each(function() { var $img = $(this), $a = $img.parent(), alt =
$img.attr('alt'); if (alt) $a.data('caption', alt); });});
```
