
Metaslanders and ari lightbox conflicts

Posted by NameLess - 2021/04/01 12:54

Hello,

i have the following problem in some of my pages i have 3-4 or more metaslanders.

When i open images from the first slider with ari lightbox i can navigate to all images from all sliders in the same page. This is something we don't want. We only want to navigate in lightbox mode only to images from the selected slider.

Here is a link of my page: <https://danelis.gr/xylina-koyfomata/>

Thanks in advance,

=====

Hello,

Open "ARI Fancy Lightbox -> Settings -> Advanced" page and populate "Custom JS code" parameter with the following code:

```
$('.metaslider').each(function(idx) { $('A', $(this)).each(function() { var $this = $(this), group = $this.attr('data-fancybox-group'); $this.attr('data-fancybox-group', group + '_' + idx); $this.attr('data-fancybox', group + '_' + idx); }) });
```

Regards,
ARI Soft
