## Custom Selector

Posted by emmanuelramses - 2021/12/04 19:12

---

Hello. Not sure whether it is possible, but on this page:

[https://emmanuelramses\(.com\)/photos/](https://emmanuelramses(.com)/photos/)

if you hover on the first frame with the green plant, the right icon takes me to the lightbox. But, no thumbnails. I am curious whether ARI can grab the contents of the album and display directly from the lightbox. I cannot find the correct selector. (If you hover and click on the left icon, you can see all contents of the album). It seems like I would need the selector for that particular album. Not sure if that is right.

Any help is greatly appreciated.

Hello,

The lightbox doesn't show thumbnails because they are located on another page and they are not available on "photos" page so a custom selector can't help in this case.

I was afraid of that. Thank you. So, I created a dummy page to try and regain that function. Can you help me get thumbnails for each slideshow project?

[https://emmanuelramses\(.com\)/custom-photos/](https://emmanuelramses(.com)/custom-photos/)

Each project is structured using the same layout, so by calling the selector, is there a way to make sure that the only thumbnails shown are for each specific project? I would not want all photos shown when the lightbox pops up.

Try to populate "ARI Fancy Lightbox -> Settings -> Advanced -> Custom JS code" parameter with the following code:

```
$(".").each(function() { var $this = $(this); $this.attr('data-options', JSON.stringify({thumb: $this.attr('href')})); });
```

Added to custom JS section and unfortunately, did not work. No noticeable impact.

Just following up to see if there is an alternative to the code posted. Thanks again.
