Need a way to disable lightbox for image blocks
Posted by lewisstudios - 2021/12/07 20:16
_____

We've used the no-lightbox class to avoid the lightbox on certain images in the past. Now that we are using Blocks more, we need a way to disable the lightbox on specific blocks but if we add no-lightbox to the link classes on an image block it gets assigned to a figure tag, not the link tag so it doesn't work.

Can you enhance ARI Fancy Lightbox so it also prevents the lightbox when the no-lighbox class is on a containing element like the figure tags used by the core Image Block and some other 3rd party image blocks?

Hello,

Try to add the following code to "Custom JS code" parameter on "ARI Fancy Lightbox -> Settings -> Advanced" page:

```
$('.no-lightbox A').each(function() { $(this).addClass('no-lightbox'); });
```

Regards,
ARI Soft

Can confirm that this solution also works with the elementor plugin by assigning the css class to the widget which will then prevent that particular element being passed to fancybox.

I needed to open some sites in a separate tab, rather than a fancybox, but I had other links on the page that I wanted opened via fancybox and this solution worked a treat. Thank you.

Using WP 6.0.1 and Elementor 3.6.7

_____

Hello,

If an element contains "no-lightbox" CSS class then lightbox will not be attached to it.
