## ARI PDF viewer showing an Error Posted by andy60103 - 2022/07/25 02:47

I am not sure when this stopped working but recently upgraded host to PHP 7.4 and running WP 6.01 and the twentyeleven theme

I have deleted the plugin, with data deleted and reinstalled but no change.

Please advise

Thanks

Resolved. In transferring to new hosting service the installation directory was changed and database needed updating for those files. Rookie error I suppose...
