
Open internal Link in Lightbox in same tab

Posted by gaugart - 2022/08/09 19:23

Hello, after I opened an internal link for first details in a Lightbox I want to open an (also internal) "More Details" Link in the same tab, but than without the Lightbox (it always opens the link also in this Lightbox, take a look at screenshot). Is it possible to realize this?

Next question: I used the option "Open links with target="_blank" attribute" for this internal link, but actually I want to use the Deeplink prefix option (Prefix is "fancybox"). How has to be this link, don't understand the documentation. Something like https://www.augenklang.de/air/leistungen/fancybox_entlastungsbetrag/ ?!? (this don't work of course..)

Thx and best https://www.ari-soft.com/images/fbfiles/images/Lightbox_Screenshot.jpg

Hello,

1. Links will be opened in main browser window if they contain target="_top" attribute.
2. The plugin generates these links automatically. It looks like:

<http://www.domain.com/original-page.html#!fancybox/0021c66a>

The link can be found in browser's address bar when open the lightbox.

Regards,
ARI Soft
