
shortcode to url

Posted by kliclick - 2022/09/26 00:24

Hi,
I use the wpdatatables plugin, and have a list of pdf files in one MySQL table as source like this:
Column A with the url of the pdf file (<https://mysite.com/wp-content/uploads/file1.pdf>)
Column B with the url of an image as the source for the link (<https://mysite.com/wp-content/uploads/file1.png>)
Column C as a virtual (calculated) column like

None of these options opens the pdf in a lightbox. The pdf is open but in the browser window. Even with the "Convert PDF links" enabled.
BUT the format ""<https://mysite.com/pypage/#!/fancybox/eb682b69>" seems to work !
My question is : how to get this generated "eb682b69" like code for the pdf files ? Can it be calculated ? And stored ? I didn't found any table with it...

Thank you.
Andres

Hello,

Is it possible to see final table on a page? We suppose data are loaded dynamically and some extra JS code is needed to attach lightbox.

You can also try to add "ari-fancybox" CSS class to links if use PRO version of "ARI Fancy Lightbox".

Hi,
Ok, now I'm opening the pdfs in a lightbox, but I don't like the "reader" or "renderer". It's my default I think from my browser, but I don't like the buttons, too many, etc. I wish to have a more simplistic one, with only pagination, scale, donload/print options.
I can have such "reader" if I embed the pdf in a page with a plugin, but not in lightbox.
Can this be done by code, or CSS, or any other way ?
The image is showing the more or less desired lightbox.
Thanks.
Regrads,
Andres https://www.ari-soft.com/images/fbfiles/images/wished_lightbox.png

It is not possible to change UI of default browser's PDF viewer. Some customization is possible if you use PDFJS viewer (it can be selected in plugin settings).
