## open only special link in lightbox

Posted by gs@weblinedesign.at - 2023/05/15 15:46

---

Hi,  
I have a question.  
On the website <https://www.360-grad-panoramen.at/>  
On the homepage I use portfolios and from there I want to open just the icon and the title in the lightbox.  
The description below the image should open as a new page in the same window.  
Please find exactly what I mean in the attached image.  
Is this possible?

Thank you very much for any answers.

Best regards

GÃ¼nter <https://www.ari-soft.com/images/fbfiles/images/1-ccac491f27404016838767a450790940.jpg>

Hello,

Open "ARI Fancy Lightbox -> Settings -> Advanced" page and populate "Custom JS code" parameter with the following code:

```
$('.fusion-rollover-gallery').each(function() {  
  var $el = $(this);  
  var $parent = $el.closest('.fusion-image-wrapper');  
  var $title = $parent.find('.fusion-rollover-title');  
  var title = $title.text();  
  
  $el.addClass('ari-fancybox-iframe').attr('data-caption', title);  
});
```

Hello,  
thank you very much for your help.  
The link on the magnifying glass works perfect now.  
I would like to have the same on the text beneath the magnifying glass.  
I think this is the fusion-rollover-title (maybe it does not work in the custom js??)  
That means: the two links (<https://www.360-grad-panoramen.at/glasenbachklamm/index.php>) should open in a lightbox.

The text under the image is perfect as it is.  
Is this possible?  
Thank you in advance for any help!

Best regards GÃ¼nter

Hello,

Try the following code instead of the previous one:

```
$('.fusion-rollover-gallery,.fusion-rollover-title-link').each(function() {  
    var $el = $(this);  
    var $parent = $el.closest('.fusion-image-wrapper');  
    var $title = $parent.find('.fusion-rollover-title');  
    var title = $title.text();  
  
    $el.addClass('ari-fancybox-iframe').attr('data-caption', title);  
});
```

Thank you very much for the help!  
Finally we found the solution, it was just a small change:

```
$('.fusion-rollover-gallery,.fusion-link-wrapper').each(function() {  
    var $el = $(this);  
    var $parent = $el.closest('.fusion-image-wrapper');  
    var $title = $parent.find('.fusion-rollover-title');  
    var title = $title.text();  
  
    $el.addClass('ari-fancybox-iframe').attr('data-caption', title); });
```

This worked perfect!  
Thank you the topic is closed and best regards.
