## lightbox only partially working in vanilla WP 6.2

Posted by gebseng - 2023/05/24 13:26

---

Hi everyone,

I have a brand new and vanilla (no plugins whatsoever except ARI Fancy Lightbox) Wordpress 6.2.2 installation for test purposes at <https://www.valuevacc.eu/> .

In there, I made an empty page with nothing but a regular WP gallery block with two images in it. The gallery is set to "Link to Media File".

Even though "Convert WordPress galleries" was activated in the ARI settings, the lightbox did not work. Only after I activated "Convert links to images" in ARI settings, the lightbox started working. But navigation between the two images in the gallery is still not possible, even though "Navigate between attachments" is also activated.

What could I do here?

thanks,

Gebhard

Hello

Populate &#x2192; Integration -> Images -> Custom grouping selectors&#x2192; parameter with the following value to group images:

.wp-block-gallery\$\$\$A

Regards,  
ARI Soft
