New date field not showing

Posted by BZ679 - 2017/10/02 10:51

_____

Hi, thank you for this brilliant plugin. I think I found a bug.

I added a new date field to MC after loading the API key to the plugin. Reloaded API key (in the plugin settings and in the form), reloaded lists, reloaded fields (in the custom fields section of the form integration), but still, I don't see the new field. Any ideas?

WP 4.8.2, CF7 4.9, CF7C 1.1.3

Thank you very much!

Hello,

Thank you for your report and sorry for the bug. It is fixed, upgrade the plugin to v. 1.1.4. The fields should be refreshed fine when click "Reload fields" button.

Regards,
ARI Soft

Hmmm. Now it's quirky in a different way :)

When I select the newsletter option in the form UI, the form doesn't finish sending, but the data gets written to the Contact Form DB.

When I select "No, thanks" (which has an empty value), the mail and the Mailchimp optin get sent :unsure:

You can see it in action here (newsletter fields at the bottom):

Could you send screenshot(s) of form configuration and "CF7 Connector" logs by email so we can investigate the problem?

Regards,
ARI Soft
