
Contact form 7 to Pipedrive

Posted by annerieke@beeproger.com - 2018/01/22 13:58

I'm trying to sync contact form 7 submissions with Pipedrive by creating a new contact person every time someone fills out a form.

I did everything you described in the manual, however the fields are not populated correctly. For example, it says the e-mail field in the form is my own email (annerieke.kortier@beeproger.com), even though the most recent sign up was with a different e-mailadress.

Also, there are lots of fields with nog value. (see screenshot attached).

Can you please let me know what's going on and what I should change?

Thank you,

Annerieke http://www.ari-soft.com/images/fbfiles/images/Screen_Shot_2018_01_22_at_14.png

Hello,

It seems this screenshot of sample data which is shown when configure Webhook ZAP on Zapier. You can see executed ZAPs on Task History page. The plugin also stores data on WordPress site. For this open "General" tab on "CF7 Connector -> Settings" page and enable "Application log" checkbox. Next time you can use "View log" link near "Application log" checkbox to see submitted data.

Regards,
ARI Soft
