
MailerLite connected, but nothing happens, no logs

Posted by fresco - 2020/01/16 04:11

frescoshop.com

MailerLite connected, but nothing happens, no logs either (both options for logs are on)

MailerLite api key verifies ok, but nothing happens... also is there should be a selector for the group in mailerlite that I want subscribers to go to? there is only one group that I have, but what if I had 2 or more?

=====

pretty dumb on my part - there is the whole tab in contact form 7 that needs setting...

there should be a note to set it up in installation instructions...

right under "group selector" there is "confirm field" selector. What is it to be selected there?

Hello,

You can read here how to integrate CF7 form with MailerLite.

Confirm field can be omitted or you can select a checkbox from the form and users will be assigned to the selected MailerLite groups only if this checkbox is enabled.

Regards,
ARI Soft
