Please help with dropdown menu!

Posted by charliebrown44 - 2020/05/07 19:04

_____

I'm using the Pro version with Mailerlite. From a dropdown menu with 3 options, I want 1 of those 3 options to add a subscriber to a corresponding Mailerlite group.

In the instruction manual it says:

"If want to subscribe users only if a form checkbox is checked, select the appropriate form field in "Confirm field" drop-down(s)."

In the "Confirm field" drop-down, it does not show the 3 separate options from my menu. How can I tag those 3 options in the Contact Form, so that they appear as individual options in the "Confirm field" drop-down?

This is the code I have entered for the dropdown menu:

(required)

Then in "Confirm field", it shows only as the option. I want it to show as the option, so that this gets added to the corresponding group...

How do I do this??? Thanks!!!!!

Or if it's not possible to do with a dropdown, is there another way, e.g. with checkboxes or something else?

_____

Hello,

Sorry, but the plugin doesn't support ability to subscribe to particular group depends on value in a drop-down, but it is possible to do it if the particular checkbox checked so you can create several checkboxes (one checkbox for each group).

Regards,
ARI Soft

_____

Hello,

Thank you for clarifying.

On Contact Form 7, there is a function called "checkbox" which gives you multiple boxes on a single line, e.g.:

In this example, I see that Contact Form 7 Connector shows only "ABC" as a "Confirm field" option. So, I just wanted to check this is true and that I'm doing things correctly and haven't misunderstood. This means that what Contact Form 7 calls checkbox (a series) doesn't integrate with this plugin as, say, 3 fields - only 1 field.

So I've tried instead what Contact Form 7 calls an "acceptance" box, and that shows up correctly as a "Confirm field". I think maybe that's what you meant?, e.g.
 Sign up to newsletter.
