## MailerLite API won't validate

Posted by Aspire - 2021/06/17 20:55

---

The MailerLite API doesn't validate, which means when I try to use the mailerlite tab it can't find my groups or use custom fields - it just says request failed.

The MailerLite API I'm using is correct as I am using it without any issues for the official MailerLite Plugin

Hello,

It looks like a conflict with a 3rd party plugin. Try the solution from this post.

Regards,  
ARI Soft

Awesome, that worked a treat! Thank you for the quick response and solution!  
It was indeed a conflict with the WP Amelia plugin.
